## Register here:

## **Learning Outcomes:**

- Identify and evaluate key sources of knowledge and resources available to health care providers, including provincial guidelines, referral networks and emergency protocols.
- Identify and explain the components of a comprehensive obstetrical assessment, including maternal history and physical examination.
- Demonstrate the management of imminent birth, following RCP's unanticipated birth outside the birthing unit for emergency obstetrical care.
- Demonstrate the initial steps of neonatal resuscitation and immediate care of the newborn, including vital sign monitoring, skin to skin care
- Discuss the initial assessment and care of a postpartum person including immediate postpartum complications.
- Describe, differentiate and outline the initial management of the most common presenting concerns during pregnancy:
  - antenatal bleeding,
  - threatened preterm labour,
  - trauma, and
  - hypertension – preeclampsia
  - postpartum hemorrhage.
