

Care of Pregnant Patients in the ED

Sessions:

- November 3rd, Cobequid Community Health Centre, Room #3228 from 0900h-1400h
- November 17th, Cobequid Community Health Centre, Room #3217 from 0900h-1400h

[REGISTER HERE: RCP Workshops](#)

Learning Outcomes:

- Identify and evaluate key sources of knowledge and resources available to health care providers, including provincial guidelines, referral networks and emergency protocols.
- Identify and explain the components of a comprehensive obstetrical assessment, including maternal history and physical examination.
- Demonstrate the management of imminent birth, following RCP's unanticipated birth outside the birthing unit for emergency obstetrical care.
- Demonstrate the initial steps of neonatal resuscitation and immediate care of the newborn, including vital sign monitoring, skin to skin care.
- Discuss the initial assessment and care of a postpartum person including immediate postpartum complications.
- Describe, differentiate and outline the initial management of the most common presenting concerns during pregnancy:
 - antenatal bleeding,
 - threatened preterm labour,
 - trauma, and
 - hypertension – preeclampsia
 - postpartum hemorrhage
